

Deep Learning Assignment4 Bonus

Mengdi Xue, mengdix@kth.se

August 2018

1 Changes

What I have changed:

1. A "<" sign was added after the end of each tweet to mark the end.
2. The synthesized text has limit of 140 characters.
3. hprev is initialized to the default value when there's a sign of end in that iteration.
4. Sequence length was changed to smaller size 10. Since the inputs are short sentences, so when the sequence length is smaller, the smooth loss starts with lower values.

2 Graph of smooth loss

The graph of smooth loss with sequence length of 25 is as following:

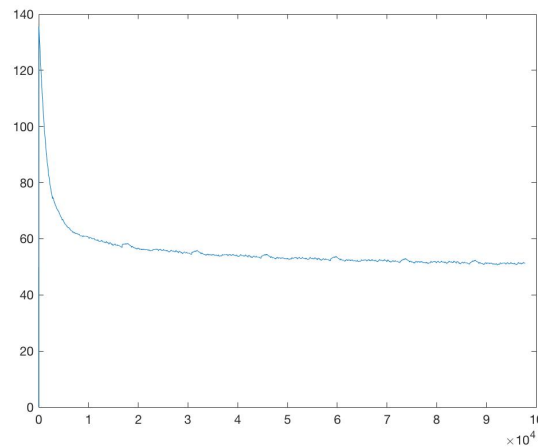

Figure 1: Smooth loss - 1

The graph of smooth loss with sequence length of 10 is as following:

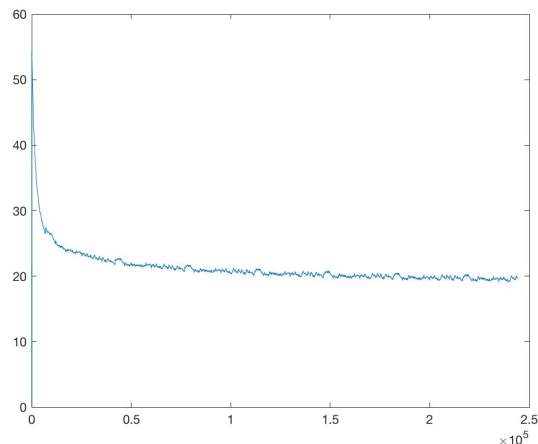

Figure 2: Smooth loss - 2

We can see that the second loss starts with much lower loss and it also ends in much lower loss.

3 Evolution of the synthesized text
